

Specialty Pharmacy

Fastest Growing Segment Now Available Through RxAmerica

Specialty pharmacy represents the most expensive and the fastest growing segment of the pharmaceutical marketplace. It now makes up 13% of total drug spend each year. Biopharmaceuticals, primarily injectable medications new to the marketplace, provide specialized treatment for patients who previously had no pharmaceutical options.

Managing specialty pharmacy through a single provider, in conjunction with your regular pharmacy benefit, increases your ability to manage and control rising costs in this segment of care. A single provider standardizes and simplifies the process; RxAmerica's integrated services put you in control.

RxAmerica offers a comprehensive Specialty Pharmacy Program that meets the unique needs of members who require these drugs. We provide convenient, reliable and cost-effective methods that deliver specialty pharmaceuticals to patients and doctors. We are committed to helping patients manage their specialty drug needs as we help plan sponsors control their costs.

As a PBM dedicated to controlling pharmacy benefit costs, RxAmerica manages for total value. Our clients see their specialty injectable costs managed due to RxAmerica's focus on appropriate, safe and effective medica-

tion use. Supported by improved health outcomes, satisfied members enjoy a higher quality of life.

Comprehensive specialty management

Biopharmaceutical products present unique challenges for patients, physicians and insurers. Patients who need biotech or injectable drugs typically have individual, chronic medical conditions that require specialized care and service. RxAmerica can meet those challenges and exceed plan and member expectations.

RxAmerica's Specialty Pharmacy Program effectively manages the fulfillment, distribution and care management for specialty medications. Once patients receive their medications, we implement our patient education program that encourages appropriate product use and compliance with the physician's orders.

Specialty Pharmacy Disease States

- Adult Somatropin Replacement Therapy
- AIDS
- Crohn's Disease
- Gaucher's Disease
- Growth Hormone Disorders
- Hemophilia/von Willebrand Disease
- Hepatitis C
- Immune Disorders
- Multiple Sclerosis
- Respiratory Syncytial Virus
- Rheumatoid Arthritis

RxAmerica provides patients with safe, uninterrupted service. We ship packages directly to the attending physician's office, the patient's home or the patient's work. All medications are shipped using secure, discreet packaging in temperature-moderating containers.

A specialty drug costs, on average, \$10,000 per year, with some drugs costing upwards of \$150,000 per year.

RxAmerica's specialty care team

RxAmerica's Specialty Pharmacy Program provides one-on-one service and active management of biopharmaceuticals. At RxAmerica, we work closely with the physician, the member and the plan administrator to facilitate the treatment regimen. We strive to provide optimal care for each member we serve. Our Specialty Care Team Members work closely together to meet the unique needs of our individual clients.
